Mobile Solutions

It is important to ensure that all your staff, not just those in the office, can access Priority. This means that those in more hostile environments & those working remotely can have real-time access to your IT systems. Priority provides this access.

Ease of Use

Unlike many systems, Priority has an inbuilt Executive Information System which provides graphical charting & drill-down capabilities to all the base level information. Also, it links with Microsoft® Office products which are comprehensive, seamless & two way.

Traceability & Audit Trail

Every Priority transaction can be user, date & time stamped to provide an accurate audit trail of events. Conformance to other regulatory information can be linked to all business processes.

Management Information

Priority is configured to the requirements of the end user. The privilege mechanism ensures security & assists in excluding screens & reports that are not relevant to individual users. Navigation tools allow easy & speedy access to all related areas of the system without reversion to the menu.

Web Based Tools

There is an in-built web interface to allow customers /suppliers to request information, orders, quotations, support etc. We also have much experience of integrating Priority with our customers own websites.

Cross Platform

Use across computing platforms including Unix, Windows & Macintosh, accessible on PC, laptop, tablet & smartphone hardware, providing you with truly anytime/anywhere access to your business data.

Cost Effectiveness

Such a breadth of functionality & a very aggressive pricing policy means Priority has the best cost performance ratio of any system today. Monthly payment plans also ensure the outlay is easily affordable.

On Premise or Hosted?

We have excellent partnerships with hosting providers so that we can bring the most cost-effective cloud solutions to our customers. This allows us to price the solution on a subscription basis if this is required.

More than 7,500 companies, & a global community of over 300,000 users enjoy the benefits of Priority ERP

Advantages & Benefits

There are a number of business benefits that our customers enjoy with a Priority ERP implementation. Priority is a mature product that has been developed for over thirty years to reach a market leading level of functionality. This means that Priority customers are secure in the knowledge that as their business grows, Priority has the breadth of functionality to meet all their needs.

Priority has been marketed worldwide by Medatech UK for over fifteen years, with more than 8,000 customers using Priority across 40 countries around the world, some with over 1000 users.

EASE OF UPGRADE

Priority uses state-of-the-art technology to ensure easy use & management of the application. The upgrading capability makes it quick & easy whilst ensuring all previous developed customisations are brought through to the latest release without further coding work - guaranteed.

TRACK RECORD

We're very proud of our worldwide reputation for looking after our customers. Most of them are on the latest release of the software & none have freely chosen to have another product post implementation. Our UK users are all enthusiastic advocates of the software & are happy to act as references.

FUNCTIONALITY

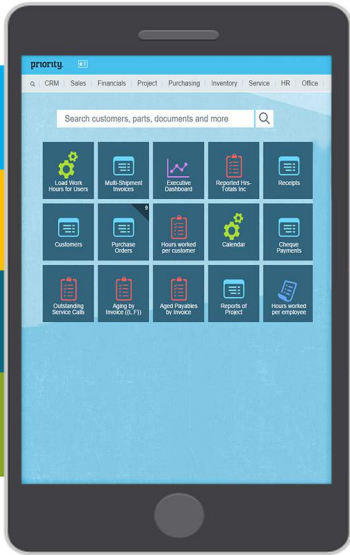

Priority has a very wide scope of functionality in all its modules & is unsurpassed by any of its direct competition in its breadth of functionality. In addition, there are a number of smaller add-on modules that can be provided for customers in specific vertical markets.

FLEXIBILITY

It's important that the functionality of the system can accurately reflect the business processes of the organisation & change with the business over time. Priority can be adapted to specific user needs, customised to provide required business processes & developed to include unique functionality.

Priority ERP is Valued...

...Across 40 Countries

...By over 8,000 Customers

...1,500 are using Cloud

...and over 300,000 Users

Manufacturing Package

Priority is the ideal solution for manufacturers needing to compete in today's market. With native support for complete inventory management, dynamic replenishment, warehouse management, production planning, costing and financial accounting, get a holistic view of your operation & find efficiencies to help you run leaner & increase your bottom line.

Distribution Package

Every aspect of your business can be interconnected with Priority, including purchase planning & requisitions, delivery scheduling & shipments, contracts, & billing. Finances, billing, procurement & administration is unified within the same program, providing consolidated information for quicker & more accurate analysis, & more efficient processes.

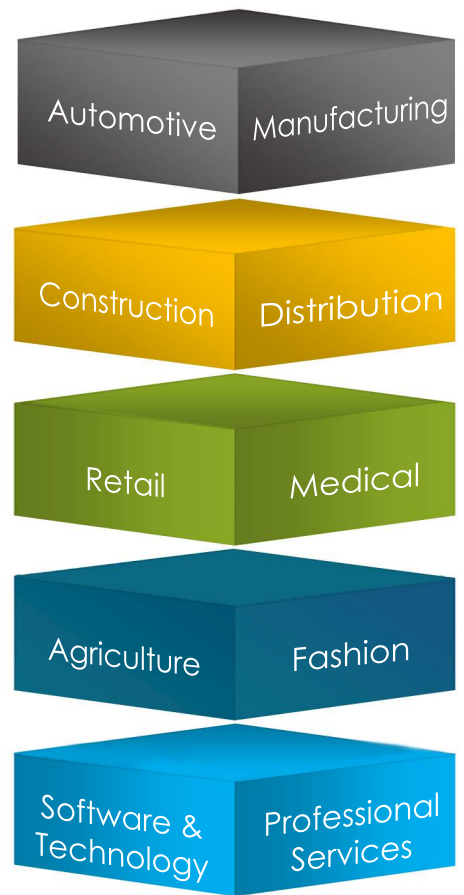

Construction Package

Priority's construction module is fully integrated with all other Priority's modules & is aimed for organisations involved in land purchase, development & residential property management. The construction module provides companies operating in this sector full control over all business processes required & enables you to manage every aspect of your project, from financials to purchasing and inventory.

Professional Services

Our extensive project management capabilities have been designed from the ground up to enable you to deliver results consistently, efficiently & on-time. With our cloud solution, your teams are no longer restricted to the office. Give them access to critical data & resources no matter where they are – on the road, in the office, or at a customer site – from any computer or mobile device.
